

# Create and Configure a Cloud9 Development Environment

---

**Thomas Compagno**

VP OF TECHNOLOGY

@tomcompagno [www.linkedin.com/in/tomcompagno](http://www.linkedin.com/in/tomcompagno)

# Overview

**Setup a new Cloud9 environment**

**Review the Cloud9 IDE components**

**Test our Cloud9 Lightsail environment**

**Discuss some of the limitations of our setup**

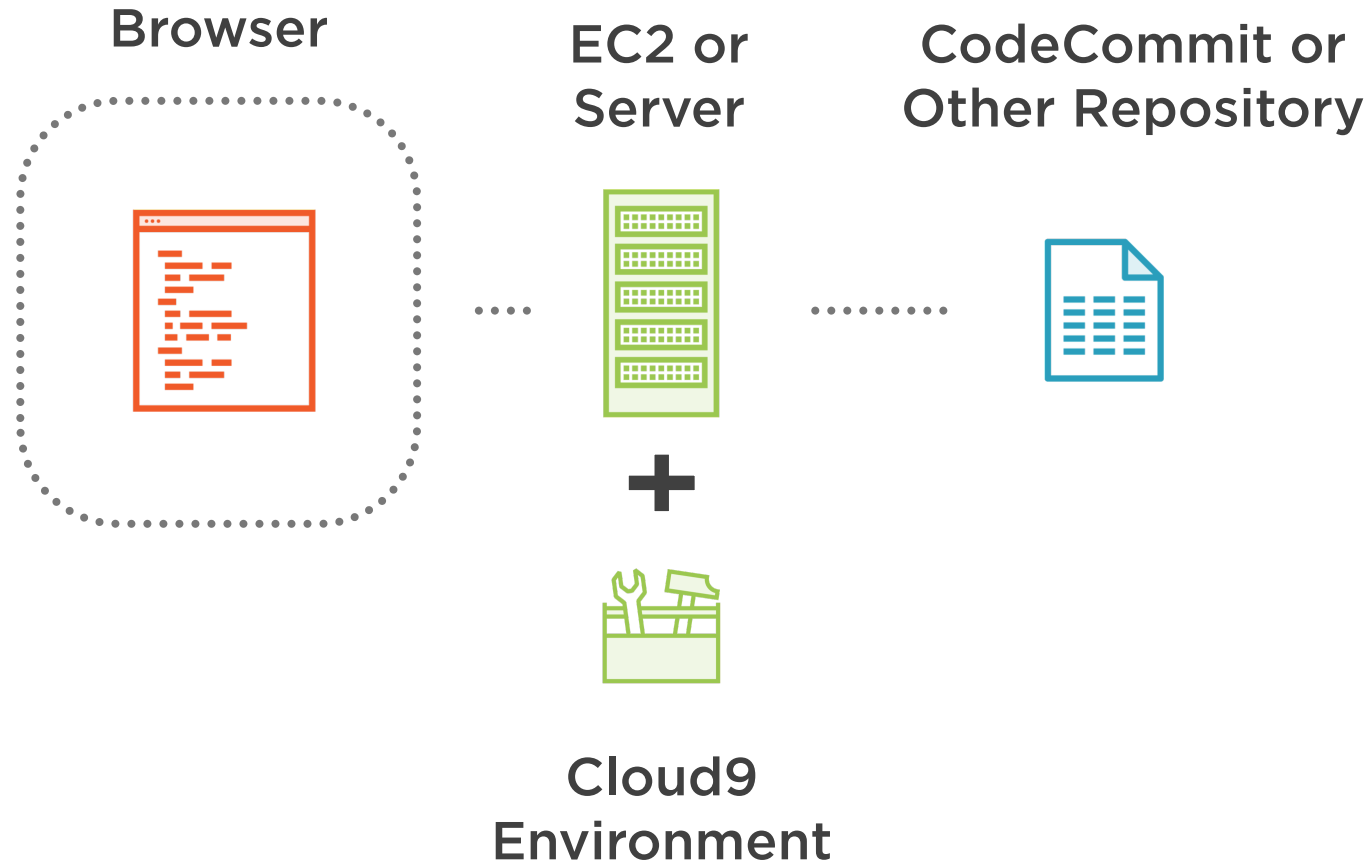

# Setup a Cloud9 Environment

---

# Basic Cloud9 Architecture

# Demo

Load the Cloud9 dashboard

Create a new environment

Configure with our Lightsail information

# Review the Cloud9 IDE

---

# What Can You Do With The IDE

**Connect and configure numerous other AWS tools**

**Richly edit many different types of files with specific language controls**

**Integrate and leverage other software development lifecycle systems**

Insert screenshot of IDE or Record Quick  
Screen click through

# Test Our Cloud9 Lightsail Environment

---

# Demo

Look at the Lightsail file structure

Find a file to edit

Check our changes are visible

- Open our Wordpress page
- Repeat steps to verify

Grab an export of our local Wordpress database

# Discuss Our Current Limitations

---

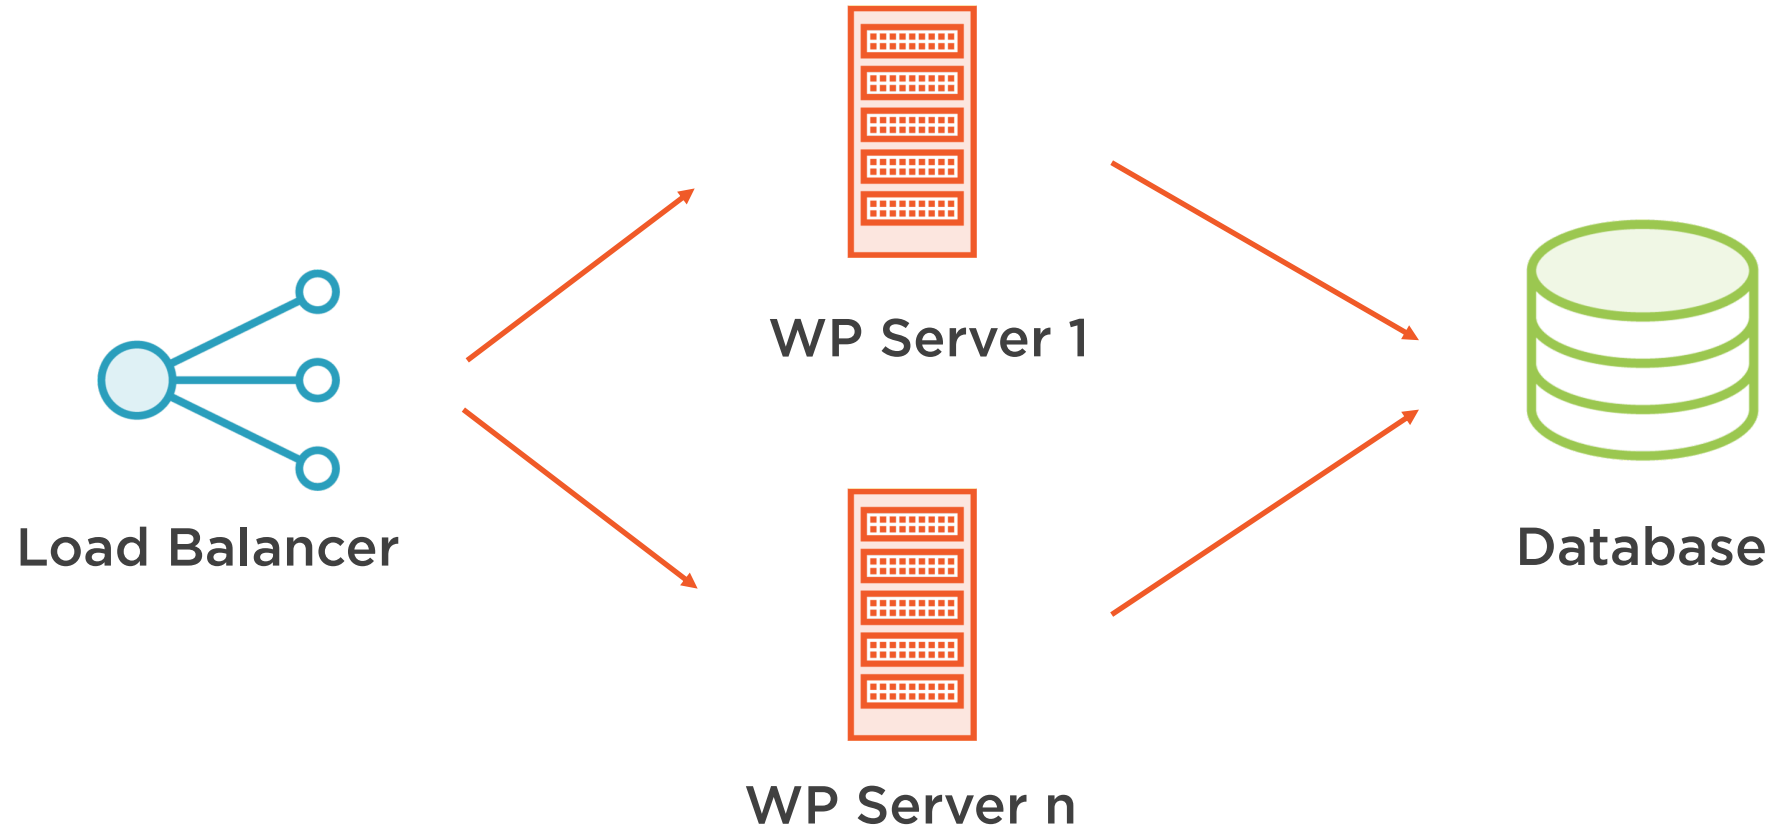

# Globomantics Use Case

---

# Proposed Architecture

# Summary

Cloud9 setup with Lightsail is easy

Cloud9 allows for live editing

Understand the limits we need to overcome for our customer
